

LOKMAN BATURAY EFE

Software Engineer

Email: lokmanbefe@gmail.com | Portfolio: <https://lokmanefe.com>

LinkedIn: <https://linkedin.com/in/lokmanefe> | GitHub: <https://github.com/lokicik>

SUMMARY

High-agency software engineer with experience shipping production SaaS products, AI/RAG workflows, billing systems, and third-party integrations in fast-moving startup environments. Strong ownership across frontend, backend, API integrations, and LLM-powered data retrieval systems.

EXPERIENCE

Beefair.ai

Remote

Founding Engineer | Next.js, React Native, TypeScript

Dec 2025 - Apr 2026

- Built and launched the web app from scratch in Next.js, owning frontend architecture, Figma-to-production implementation, and MVP release readiness.
- Maintained and stabilized the React Native mobile app through bug triage, fixes, and cross-platform flow alignment across ongoing feature work.
- Worked directly with backend, product, and management to shape MVP scope, resolve launch blockers, and align web/mobile user flows.

MLabs.vc

Remote

Full-Stack Engineer | Next.js, Python, TypeScript

Nov 2025 - Jan 2026

- Worked across Prymatica, 1Lookup, and 1Capture, shipping full-stack features in a fast-moving async environment.
- Built Stripe billing flows for 1Capture, including trial pages, pricing changes, revenue-based subscriptions, and production-facing UI/UX fixes.
- Built Python automation for Prymatica to generate outbound email templates and support lead-generation workflows.

CompanyDNA AI

Remote

Backend Engineer | Node.js, Python, GraphQL, AWS

Apr 2024 - Sep 2025

- Integrated 30+ third-party platforms using OAuth2/Nango, handling auth, data sync, rate limits, pagination, schema design, and API documentation.
- Built multitenant RAG/data retrieval workflows with indexing, BM25/ranking logic, vector search flows, and evaluation pipelines for AI-assisted product features.
- Created OpenAPI documentation and a Stripe-like API key system to expose platform capabilities to external users.

Cosmos

Edirne, Turkey

AI Engineer | Python, OpenCV, YOLO, Linux

Dec 2023 - Jun 2024

- Built computer-vision and OCR pipelines with Python, OpenCV, YOLO, Roboflow, Tesseract, PaddleOCR, EasyOCR, and Linux-based ML workflows.
- Processed 20,000+ labeled records and contributed to multimodal AI and edge-AI prototypes using camera input, sensors, Jetson Nano, and Arduino.

SELECTED PROJECTS

- House Royale** | Live: <https://houseroyale.fun> | GitHub: <https://github.com/lokicik/house-royale>
Multiplayer real-estate prediction game with Go WebSockets, React, FastAPI, Firebase, scraped real-estate data, and 9 ML models.
- GDG On Campus TU** | Live: <https://gdgoncampustu.com> | GitHub: <https://github.com/GDG-on-Campus-Trakya/website>
Student developer platform with registration, admin workflows, realtime quiz/game systems, 2,000+ visitors, and 200+ live users.
- EvalForge** | GitHub: <https://github.com/lokicik/evalforge>
AI prompt evaluation dashboard for comparing model outputs, managing test cases, and tracking prompt performance.
- PulseGuard** | GitHub: <https://github.com/lokicik/pulseguard>
Production-style API monitoring dashboard with health checks, incident tracking, status pages, and alerting workflows.

EDUCATION

Trakya University

Edirne, Turkey

B.S. in Computer Engineering | GPA: 3.42/4.00

2022 - 2026

- Led student technical teams of 20+ to 50 people on university automation projects, including digital attendance, student affairs workflows, and reporting systems.
- Software Team Lead at GDG On Campus TU; built live event systems and organized AI/RAG workshops for the student developer community.

SKILLS

Languages: TypeScript, JavaScript, Python, Go

Frontend: React, Next.js, React Native, Tailwind CSS

Backend: Node.js, Express, FastAPI, GraphQL, WebSockets, REST APIs, SOAP APIs

Data & Infra: PostgreSQL, MongoDB, Firebase, AWS, Docker

AI/ML: RAG, vector search, BM25/ranking, OCR, OpenCV, YOLO, model evaluation, LLM tooling

Integrations: OAuth2, Nango, API pagination, rate limits, schema design, OpenAPI docs
