Experience

Software Engineer, Bottomless (YC W19) – Remote

June 2026 – Present

- Shipped end-to-end features for a production AI platform using Next.js and React Native, spanning web, mobile, APIs, persistence, and production rollout
- Designed evaluation workflows for LLM routing and multi-agent coding harnesses, using controlled production-like runs and event-level telemetry to isolate model, orchestration, infrastructure, and measurement failures
- Improved LLM routing and streaming reliability by parallelizing classification, eliminating redundant data loading, bounding model context, and strengthening failure handling under concurrent workloads

Founding Engineer, Beefair – Remote

Dec 2025 – Apr 2026

- Built the Next.js app from scratch, owning frontend architecture, design implementation, and MVP launch readiness
- Stabilized the React Native app by fixing 40+ cross-platform bugs and unblocking critical web and mobile workflows
- Drove MVP delivery by resolving launch blockers and aligning priorities across backend, product, and management

Full-Stack Engineer, Mlabs.vc – Remote

Nov 2025 – Jan 2026

- Shipped full-stack features across Prymatica, 1Lookup, and 1Capture, spanning frontend and backend workflows
- Built Stripe billing flows for 1Capture, enabling trials, pricing updates, and revenue-based subscriptions
- Automated outbound email generation with Python, reducing manual lead-generation effort by 50%+

Backend Engineer, CompanyDNA AI – Remote

Apr 2024 – Sept 2025

- Integrated 30+ third-party platforms using Node.js, OAuth2, and Nango, handling authentication, data synchronization, rate limits, pagination, schema design, and API documentation
- Built multitenant RAG workflows using indexing, BM25 ranking, vector search, and evaluation pipelines for AI-assisted product features

AI Engineer, Cosmos – Onsite

Dec 2023 – June 2024

- Built computer-vision and OCR pipelines with Python, OpenCV, YOLO, Roboflow, Tesseract, and Linux-based ML workflows for camera-based prototypes
- Processed 20,000+ labeled records and contributed to multimodal and edge-AI prototypes combining camera input, sensors, Jetson Nano, and Arduino

Skills

Languages: TypeScript, JavaScript, Python, Go

Development: React, Next.js, React Native, Node.js, FastAPI, GraphQL, PostgreSQL, MongoDB

Applied AI & Infrastructure: LLM evaluation, agentic systems, RAG, vector search, OpenCV, YOLO, AWS, Docker

Projects

House Royale

houseroyale.fun

- Built and launched a real-time multiplayer real-estate prediction game with WebSocket lobbies, scraped real-estate datasets, Firebase authentication, and 9 ML models served through a Python inference service

GDG On Campus TU

gdgoncampustu.com

- Built and operated a live event platform with registration, admin workflows, real-time quizzes, and audience games, supporting 2,000+ visitors and 200+ concurrent users during a three-day event

Education

Trakya University – B.S. in Computer Engineering

2026

- Led 50+ students in delivering university automation systems for attendance, student affairs, and reporting
